**Sound Card:** DirectX® compatible

**Additional Notes:** Running Action! requires administrator rights.

English,French,Italian,German,Japanese,Polish,Portuguese,Russian,Traditional Chinese,Dutch,Simplified Chinese

---

I was in doubt before buying it but now I don't regret it. In OBS I used to have so many frame drops, motion loss, encoder issue while streaming. The stream quality in Action is amazing. I stream at 1080p 60 FPS with X264 encoder (Ryzen 7 2700X). It runs buttery smooth with consistent good quality. The software is very light too & UI is very simple, technically just like what a beginner wish it to be. Thankfully I can use Streamlabs overlays in action, so I can get all widgets I want. Recording quality is also miles ahead of Geforce Experience with few Tweaks. I am more or less settled with this software. Please don't mess this up in future.

. It's useful for what I need. I love it.

It has so many features and settings it can almost make you a drink.

As it says low-cpu usage. My fps did not drop at all while using this.. Action! Cannot auto start with window ? Why ?. Works great, support is great. Very low impact with good functional ui and options. Invaluably useful.. it was working for years great , but after the may update it will not load
