Imagine I have the following class in my project: public class Library: Activity { public static Library Create() { Library l = new Library(); l.Create(); return l; } } I would like to use this class as an activity in my Xamarin.iOS project. I know that Xamarin Studio provides a special class that can be used to define new activity types, however, I am struggling to find out how I can use it. I have tried Library.Create(); as well as ((Activity)Library.Create()).ChildActivities.Add("Home", MyHomeActivity.Create()); but these methods do not seem to be recognised. A: As far as I remember ActivityInjector is the class you are looking for. I'm not working with Xamarin Studio so I haven't used it, but I know ActivityInjector from the MonoTouch project. I think this is what you are looking for. There's also a decent tutorial from David Smet Q: Need to extract details from LDAP using R How can I extract the all the attributes from a given user using R. For example, I have this LDAP group: member: atma name: atma objectClass: person sn: atma uid: atma How can I get all the attributes using R? I have been trying this one, but it
